New

S-13

MODEL S-13

Capacity, 2 tons; Chassis length, 38"; Low, 3¾" — High, 20"; Maximum height of frame, 6"; Hydraulic lift, 16¼".

MODEL S-7

And here's the New Model S-7 Curb Jack—capacity, 3000 lbs. 3¾" Low; 15¾" hydraulic lift; 19" High; maximum height of frame, only 6¾".

SSTREAMLINED 2-ton jack — lower for snaking under newer cars — power unit simplified — enclosed to prevent water, dirt, and grit from reaching pump, ram plunger, and other working parts. A longer floor jack — with handle pivoted to permit full pump stroke of handle under cars with long front or rear overhang — operator remains upright instead of crouching. Handle stands vertically when desired — no tripping over — no running over. A fast, easy-working, trouble-proof floor jack — and a real buy at \$35.50. (Slightly higher on West Coast and in Canada.) Ask your jobber salesman about the New S-13 and New 1937 line of Blackhawk Hydraulic Jacks.
